

Overview

This assignment requires you to analyze the Business Intelligence (BI) landscape of a real-world industry domain. Based on your registration number, you will be assigned one of three industry use cases. You are expected to identify the key performance indicators (KPIs) used in your domain and critically evaluate how those KPIs drive decisions at different organizational levels.

Use Case Allocation

Determine your assigned use case using the last digit of your registration number:

Last Digit of Reg. No.	Condition	Assigned Use Case
0, 3, 6, 9	Last digit % 3 == 0	Retail & E-Commerce
1, 4, 7	Last digit % 3 == 1	Healthcare
2, 5, 8	Last digit % 3 == 2	Financial Services & Banking

Assignment Tasks

Your report should address the following three tasks for your assigned use case:

Task 1 – KPI Identification

Identify and describe at least five (5) Key Performance Indicators (KPIs) relevant to your assigned industry domain. For each KPI, briefly explain what it measures and why it matters to the business.

Task 2 – Decision-Making Analysis

For each KPI identified, explain how it informs decisions at three organizational levels:

- Strategic decisions – Long-term planning and direction (e.g., market expansion, investment priorities)
- Operational decisions – Day-to-day process improvements and resource management
- Executive decisions – High-level reporting, performance oversight, and stakeholder communication

Task 3 – Real-World Application

Provide one real-world example (a company or case study) from your assigned domain that demonstrates effective use of BI and the KPIs you described. Explain the business impact achieved.

Submission Requirements

- Format: PDF only
- Length: 3–5 pages (excluding cover page and references)
- Font: Arial or Times New Roman, 12pt, 1.5 line spacing
- Include your full name, registration number, and assigned use case on the cover page
- Submit via the course portal before the deadline

Important: Late submissions will not be accepted. Plagiarism will result in a zero grade. All work must be your own — use of AI-generated content without proper attribution is not permitted.
